

Gleb Baranov

Full-Stack Software Engineer — React/TypeScript · Python/Django · React Native · Node.js · PHP

Baranoff.bleb@gmail.com • github.com/ecspecial

English — professional (C1) • Open to remote work and relocation

PROFILE

Versatile engineer with 5+ years of commercial experience building fintech, high-load and AI products end to end — from architecture to production operations. Most recently led development of a crypto margin-trading platform (NestJS, PostgreSQL, Redis, Kubernetes) and shipped a generative-AI platform with 10,000+ users and Stripe payment processing. Fluent across the stack: TypeScript/JavaScript, Python (Django, FastAPI), Go, C++; React/Next.js on the frontend, GraphQL and REST APIs, PostgreSQL, Docker, AWS, CI/CD. Hands-on experience integrating payment and banking APIs, handling sensitive financial data, and working in distributed international teams.

CORE SKILLS

Frontend: React 18, TypeScript, Next.js, Vue/Nuxt.js, Redux / state management, Material-UI, TailwindCSS, React Hook Form

Mobile: React Native (iOS + Android), App Store and Google Play release & maintenance

Backend: Python (Django, FastAPI, Flask), Node.js (NestJS, Express, Fastify), Go, C++, PHP (legacy-system integration)

API: GraphQL (Apollo Client, Hasura), REST (Axios), WebSockets, async processing, background jobs & queues (Dramatiq/Celery-style workers, RabbitMQ)

Databases: PostgreSQL (advanced SQL, query optimization), Redis, MongoDB, MySQL

Cloud / DevOps: AWS (ECS, S3, CloudFront, Route53), Docker, Kubernetes, GitHub Actions (CI/CD), Nginx, Linux, PM2, Prometheus/Grafana

Fintech & integrations: Stripe and payment processing, banking & exchange APIs, Auth0/JWT, encryption and secure handling of sensitive data, security best practices

Testing: Jest, Vitest, PyTest, code review

AI / Data: LLM & generative-model integration (OpenAI API and others), data pipelines, market-data analysis systems, Telegram Bot API / mini-apps, Web3 (smart contracts, wallets)

EXPERIENCE

Radiance LLC

Jul 2025 — present

Senior Backend Developer / Tech Lead — *fintech: crypto margin-trading platform*

- Designed and built a high-load trading platform from scratch: NestJS, Fastify, PostgreSQL, Redis, Kubernetes.
- Implemented real-time workers and exchange connectivity (multicast + binary gateway) for low-latency market-data and order processing.
- Set up monitoring and observability (Prometheus, Grafana); owned reliability of financial data processing.
- Led the technical side of acquiring a third-party crypto exchange built on a PHP stack: legacy codebase audit and integration planning.
- Successfully integrated the trading platform as a service into the acquired exchange's infrastructure — unified margin trading on top of its user base and liquidity, with zero downtime for the exchange.
- Technical leadership: architecture decisions, code review, development planning for the team.

Mixart.ai

2024 — 2025

Full-Stack Engineer — *generative-AI image platform*

- Built and operated an image-generation platform serving 10,000+ users: Next.js, TypeScript, Node.js, MongoDB, cloud GPU APIs.
- Integrated Stripe and other payment providers: subscriptions, one-off payments, webhooks, refunds.
- Designed async job queues for GPU inference workloads; ran production infrastructure (PM2, Nginx).

Carrier Transport Aggregator

2023 — 2024

React Native Developer (iOS / Android) — *mobile app for freight / carrier order aggregation*

- Built a cross-platform React Native mobile app for a transport aggregator serving carriers (carrier cabinets, orders, trip status flows).
- Integrated with backend APIs: auth, order intake and management, push notifications, online/offline operation.
- Successfully published and maintained the app in the Apple App Store and Google Play (releases, updates, store compliance).

Independent Contract Practice

2022 — 2025

Contract Software Engineer (Python / TypeScript) — *alongside full-time roles*

- Delivered contract projects for companies in e-commerce, HR-tech and finance.
- Migrated legacy systems to new third-party APIs (payments, CRM, marketplaces, messaging) with no disruption to business operations.
- Built Python services (Django, FastAPI, Flask) for automation, data collection and reporting, backed by PostgreSQL/MongoDB.
- Embedded LLM/AI APIs into client products: assistants, content pipelines, Telegram bots and mini-apps.

Prosveshcheniye Publishing (JSC)

2023 — 2024

TypeScript Developer — *e-learning platforms*

- Developed online-learning systems for educational institutions: TypeScript, Vue.js; integration with the publisher's internal services.

RICE LLC

2023 — 2024

Senior JavaScript Developer — *e-commerce automation*

- Built an automation system for the Wildberries marketplace: React, Node.js, Python, Docker, Nginx, MongoDB.

Dream Team HR Agency

2022 — 2023

JavaScript Developer

- Integrated the agency's CRM with the HeadHunter API (Node.js), automating vacancy and candidate workflows.

Chamber of Commerce and Industry, Rostov Region

2021 — 2022

JavaScript Developer

- Built and supported a contact-aggregation service for the PRODEXPO trade event: React, Node.js.

Earlier (2018–2021) — management experience in trade and logistics (head of logistics department).

EDUCATION & CERTIFICATIONS

HSE University

2022 — 2024

Master's degree — Public Administration

Plekhanov Russian University of Economics

2018 — 2022

Bachelor's degree — Commerce; coursework in Digital Systems Programming

CareerFoundry

2021 — 2022

Certification — Full-Stack Web Development

CompTIA

Certification — Network+ (network engineering)

LANGUAGES & INTERESTS

Languages: Russian — native; English — professional working proficiency (C1), daily work in English-speaking teams

Interests: market-tracking and capital-flow analysis systems in the crypto sector, cybersecurity, long-distance running, CrossFit
